PROFESSIONAL PROFILE

Senior Machine Learning Engineer and Data Scientist with extensive experience designing, developing, and deploying machine learning solutions. Strong background in statistical modelling, predictive analytics, and end-to-end ML development, complemented by research experience in quantitative finance and sustainable finance.

WORK EXPERIENCE

Senior Machine Learning Engineer – Luxury Escapes July 2025 – October 2025
Sydney, Australia

- Developed a **two-stage recommendation system** combining neural retrieval with gradient-boosted ranking, achieving statistically significant improvements in CTR and CVR through online A/B testing.
- Built a **model-agnostic RecSys evaluation framework** incorporating retrieval and ranking metrics for offline model benchmarking.
- Developed **alternative destination recommendations** using hierarchical clustering and association rule mining on user browsing and purchasing behaviour.

Senior Data Scientist / ML Engineer – N.Rich Technologies July 2021 – July 2025
Helsinki, Finland (Remote)

- Developed **B2B intent scoring models** leveraging first- and third-party behavioural data to measure account engagement and buying intent; adopted by 20+ clients.
- Developed **Ideal Customer Profile (ICP) models** using firmographic, technographic, and historical opportunity data to identify and rank B2B accounts based on similarity to ideal customer profiles.
- Developed a **multilingual NLP pipeline** for automated keyword extraction from B2B websites.

Machine Learning Engineer – EPAM Systems December 2020 – June 2021
Novosibirsk, Russia

- Developed **computer vision solutions** for scanned document table extraction and real-time facial segmentation, including interactive applications and model deployment.
- Built a **3D object tracking system** using Mask R-CNN, stereo vision, and depth estimation for industrial applications.

Machine Learning Engineer – Zarplata.ru August 2017 – December 2020
Novosibirsk, Russia

- Developed a **two-stage recommendation system** for job matching, increasing job-offer clicks by 30% and direct replies by 5% in A/B tests.
- Built **NLP-based resume parsing models**, with the implemented solution encouraging 26% of anonymous users to submit resumes.

EDUCATION

University of Technology • Sydney, Australia February 2023 – Present
Doctor of Philosophy • *Finance*

Paris School of Economics • Paris, France September 2016 – September 2017

Master of Economics • *Quantitative Economics*

Novosibirsk State University • Novosibirsk, Russia 2015 – September 2017
Master of Economics • *Quantitative Economics*

Novosibirsk State University • Novosibirsk, Russia September 2011 – June 2017
Bachelor of Management • *Management*

Publications / Working Papers

Breaking with Tradition: Media ESG Signals and Portfolio Performance (2025)
Vladislav Pyzhov, Kristoffer Glover, Vitali Alexeev

Market Perception, Identification, and Market Impact of ESG Events (2024)
Vladislav Pyzhov, Kristoffer Glover, Vitali Alexeev

Comparison of methods of data mining techniques for the predictive accuracy (2017)
Vladislav Pyzhov, Stanislav Pyzhov

Projects

Easy Event Study (2024)
Project link: github.com/Darenar/easy-event-study
Description: A Python package to conduct a financial event study with just a few lines of code

Asset Pricing Trees with Pruning (2022)
Project link: github.com/Darenar/ap_trees
Description: AP-Tree model that applies the concepts of Decision Trees and Penalized Regression for constructing low-dimensional cross-sections of asset returns given a set of stock-characteristics.

Deep Learning for Asset Pricing in PyTorch (2021)
Project link: github.com/Darenar/DeepLearningAssetPricing_torch
Description: GAN model asset pricing model with LSTM and Feed-Forward layers to account for macroeconomic conditions and non-linear interactions between firm-specific characteristics.

Technical Skills

- Programming languages: Python, R, Git, Bash, Linux, Vim, HTML, Docker.
- Databases languages: SQL, MySQL, PostgreSQL, MongoDB, ElasticSearch.
- Software tools: PyCharm, Robo 3T, iTerm, DataGrip, Rstudio, Sublime, Jira.
- Visualization & reporting tools: Jupyter Notebook, LaTeX, ggPlot, Seaborn, MatplotLib, Roxygen2.
- Cloud platforms: Google Cloud, Vast.ai.
- Languages: Russian (native), English (advanced), French (conversational).
